## Introduction

Web programming, also known as web development. Examples of web applications are food delivery sites like Zomato and Swiggy. There are two broad divisions of web development – frontend development (also called client-side development) and back-end development (also called server-side development).

## Example of web page

## **HTML**

HTML is the standard markup language for documents designed to be displayed in a web browser. It can be assisted by technologies such as Cascading Style Sheets (CSS) and scripting languages such as JavaScript.

Web browsers receive HTML documents from a web server or from local storage and render the documents into multimedia web pages.

HTML describes the structure of a web page semantically and originally included cues for the appearance of the document.

## **CSS**

(CSS) is a style sheet language used for describing the presentation of a document written in a markup language such as HTML or XML (including XML dialects such as SVG, MathML or XHTML). CSS is a cornerstone technology of the World Wide Web, alongside HTML and JavaScript.

## **JAVASCRIPT**

JavaScript, often abbreviated as JS, is a programming language that is one of the core technologies of the World Wide Web, alongside HTML and CSS. As of 2022, 98% of websites use JavaScript on the client side for webpage behavior.

## **Problem Statement**

Web application development challenges during planning

- Clearly defining your goals.
- Choosing the right technique.
- UI & simplistic design.
- Performance and speed.
- Scalability.
- Web security threats.
- Keeping the backend clean and understanding for others.

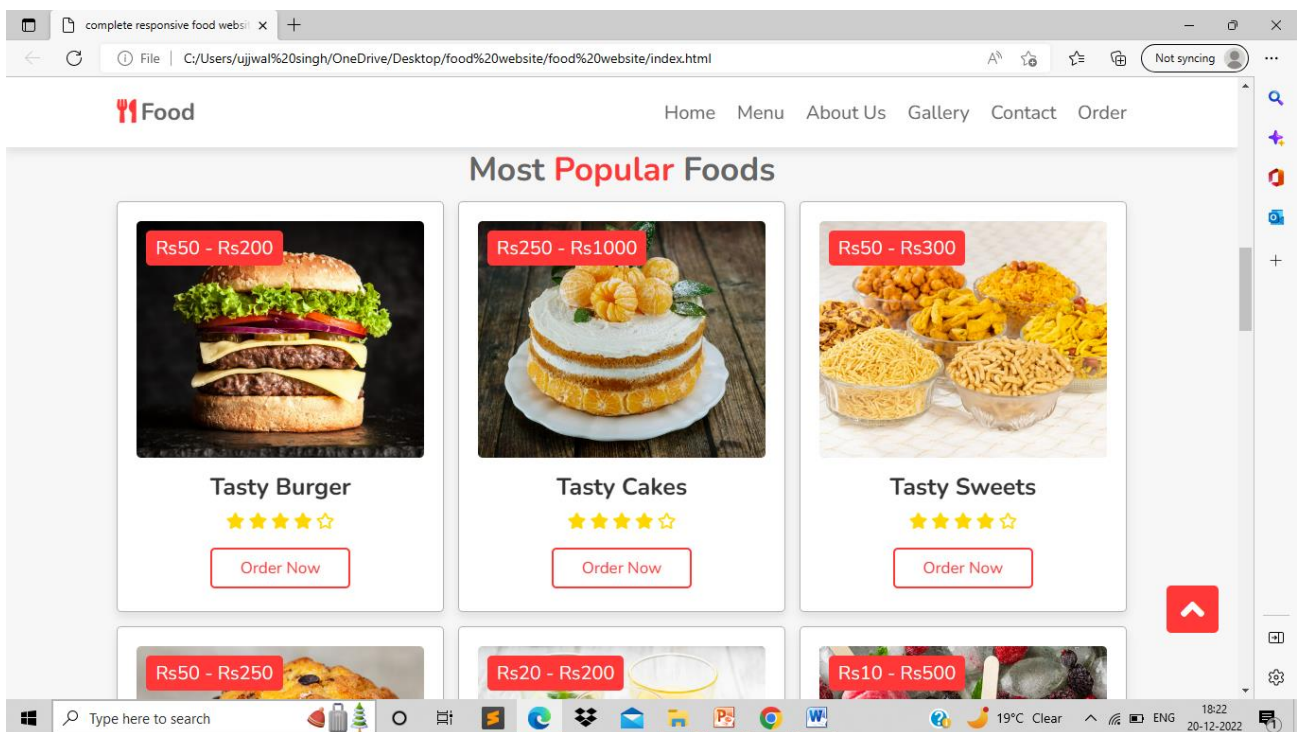

## **Aim Of the Project:-**

- Understand the principles of creating an effective web page, including an in-depth consideration of architecture using CSS
- Become familiar with designing principles that relate to web design and learn how to implement theories into practice.
- Develop skills in analyzing the usability of a web site.
- Learn the language of the web: HTML CSS and Javascript.
- Learn CSS grid layout and navigation.
- Learn techniques of responsive web design, including media queries.
- Develop basic programming skills using Javascript .
- Be able to embed social media content into web page.

## Objective:-

To develop a webpage using HTML, CSS, JavaScript.

In this project, we are trying to develop a website that is to be used for fulfill customer demand by making them satisfied with our service and delicious food.

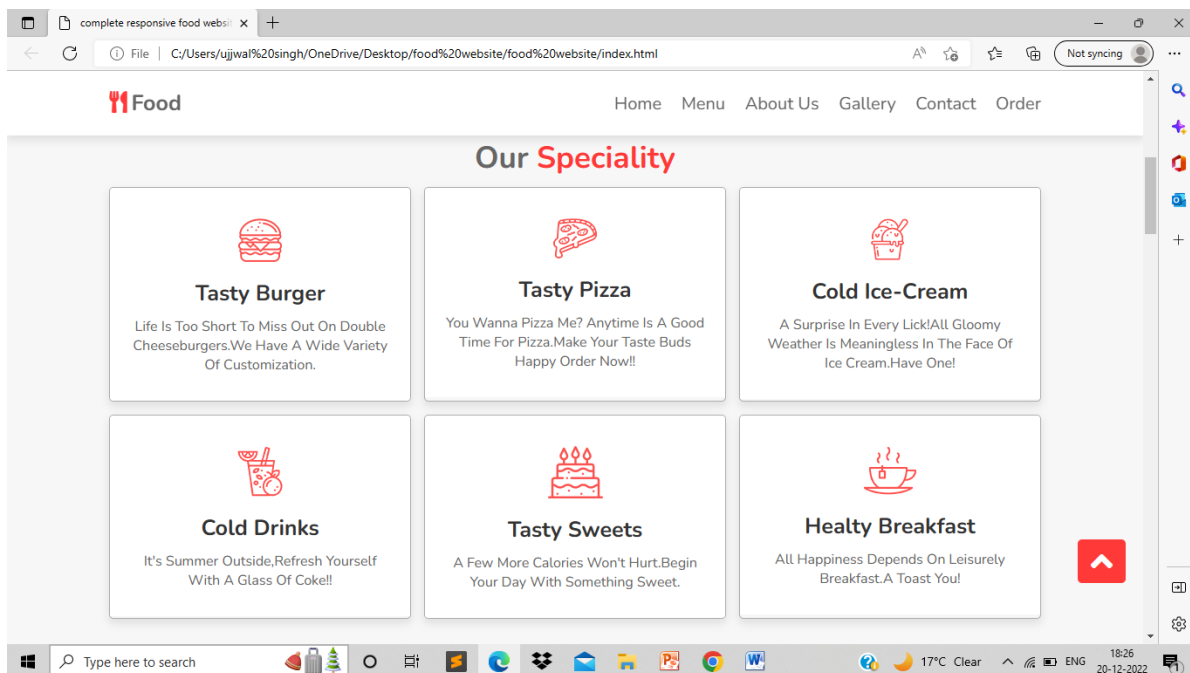

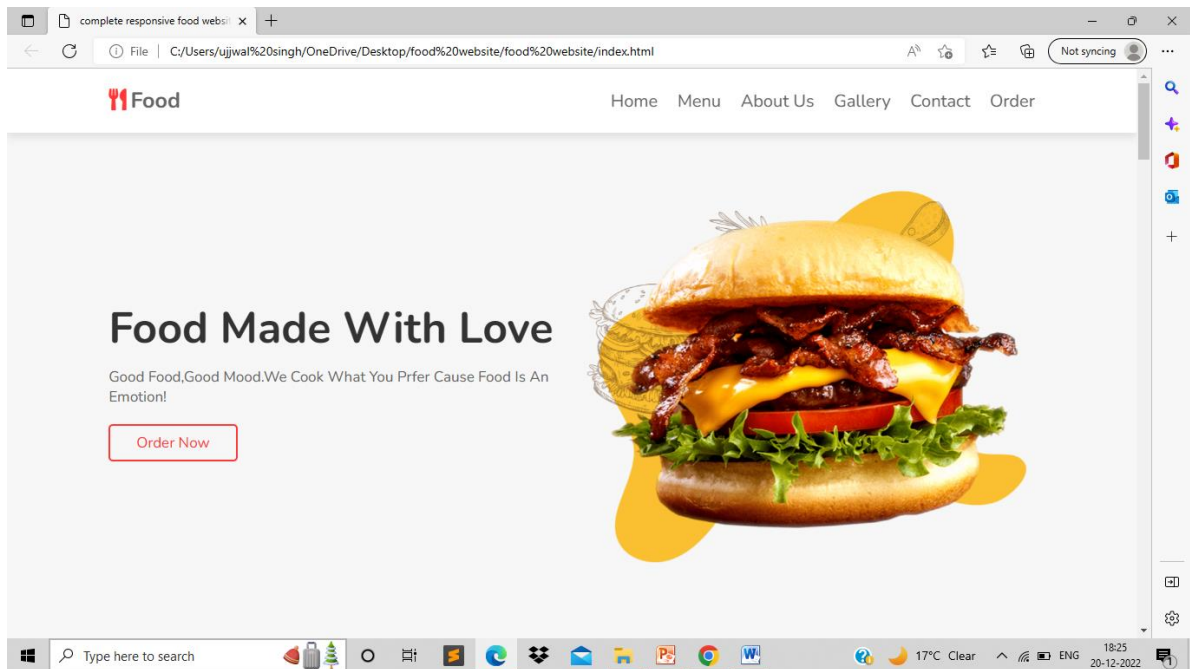

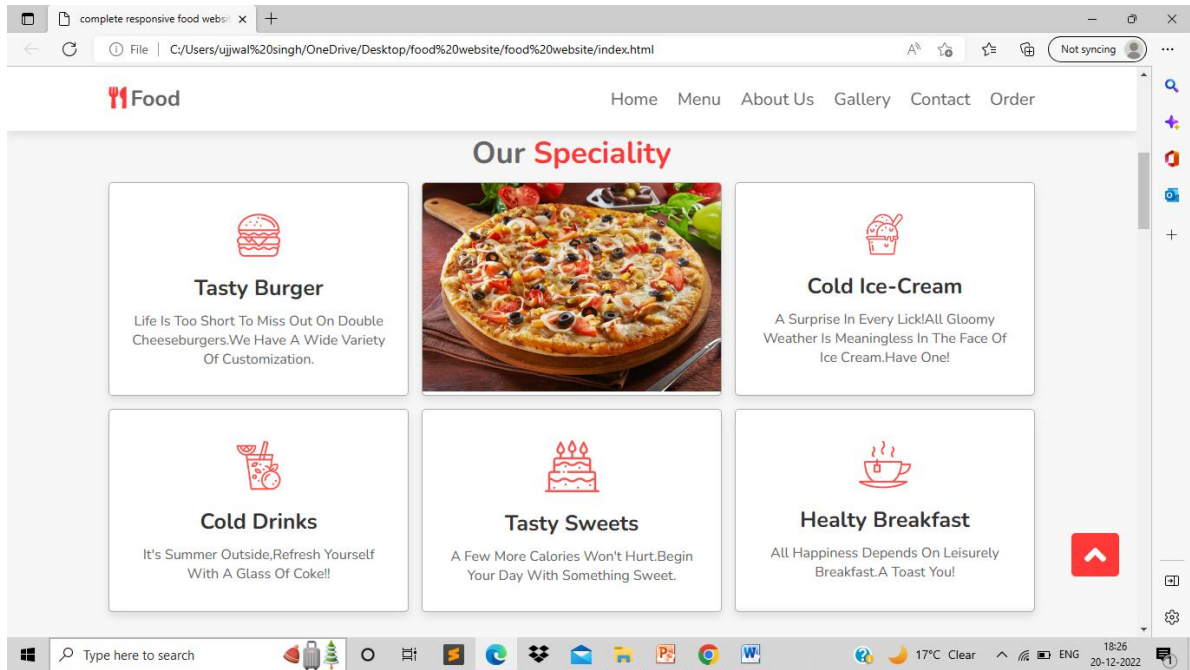

## **Basic Hardware and Software Requirement:-**

1. Operating System : Windows 8/10/11
2. Processor : Intel Core i3
3. System Type: 64/32bit
4. Internet connection Required
